

Shorter 3.5mm cables for your personal convenience

Higher quality sound between your mobile phones and headphone portables

Oyaide "HPSC-SS / LS / LL"

Overview

"HPSC-SS / LS / LL" can be used as a 3.5-stereo mini-mini cable for relay cables for connecting high resolution players and mobile phones to portable headphone amplifiers and so on.

With the introduction of "HPSC-35J / 63J" and "HPSC-SS / LS / LL", your headphone life can be more convenient and fascinating high quality sound can be acquired

Characteristics

HPSC Series is a new series of headphone / portable audio cable of Oyaide Electric, which introduced precision conductor "102 SSC" and "silk". Precision conductor "102 SSC" is a conductor for audio cables produced by Oyaide Electric and has already earned high praise around the world.

The basis of the technology is "mechanical peeling" which removes impurities physically 100% of copper wire surface based on oxygen free copper base, "natural diamond die" which smoothes the copper wire surface to the limit, strict temperature Supported by Japan's tall copper and wire drawing technology, which is one of the world's top classes, including controlled two times of heat treatment, uniform control of uniformity of wire diameter with processing accuracy of $\pm 1 \mu\text{m}$ or less, the clearness of HPSC Series It is the source that produces wide range sound. The thickness of the signal line constituted by the

precision conductor "102 SSC" is a margin of 0.3 scale. From delicate high frequency to powerful low frequency, we deliver delicate headphone output faithfully without stagnation.

The precision conductor "102 SSC" was also adopted as a shield, making it a flexible spiral shield.

Precision Conductor 102 SSC

HPSC Series is a new series replacing the HPC Series. The key technology is in "Precision Conductor 102 SSC" and "Silk". For the cable conductor, "Precision Conductor 102 SSC" is adopted as a new material to replace PCOCC-A. As "high-end audio cable", Oyaide Electric's "Precision Conductor 102 SSC" has already earned high praise around the world, but this is the first time to adopt it for headphone cable.

The conductor configuration is a 7/7 / 0.089 rope twist excellent in flexing resistance; its thickness is 0.3 margin affordable. From delicate high frequency to powerful low frequency, we deliver delicate headphone output faithfully without stagnation. Also adopt "precision conductor 102 SSC" for the shield, making it a flexible spiral shield.

Pure silk filament

For intervention, adopt 100% pure silk filament that does not electrostatically charge with low electrostatic capacitance. When a signal flows in the cable, weak vibration occurs, and substances charged with static electricity cause corona discharge due to the vibration. To solve this problem, mount the silk filament. In addition, she covers "100% pure silk jacket" on the exterior of the cable. These synergistic effects greatly reduced noise without compromising flexibility. The chic cable color of mosaic style by white and black matches any headphone without any discomfort.

Original terminal connector

Plugs specially designed to give your own identity. The material of the metal part adopts brass which satisfies European RoHS directive. To the contact part which is also called the main point of signal transmission, silver plating of 1.5 μ thick was directly applied, and 0.3 μ m thick rhodium plating was applied to the surface. This prevents corrosion of contacts and contributes to improvement of transmission characteristics.

The outer shell of the outer shell also reflects the craftsmanship of Oyaide Electric. Cutting is performed carefully one by one by NC machining, Verilochrome plating is done to

finish as well as the camera lens after precisely carving knurl. In addition, these plugs are joined to the cable by the audio special solder "SS - 47".

Pouring aesthetic sense up to detail, creating superb quality. This attitude is the theme that OYAIDE electricity will continue. For every dense and polite finish, the essence of Japan's unique craftsmanship will live.

Three terminal variations

A stereo cable made to connect a portable player and a headphone amplifier. The length adopted the opinion most received from the monitor, and the cable exposure degree was set to 8 cm. In addition, we prepared three types of plug shapes to accommodate any type of stations.
