

## Black Rhodium Traditional Style Loudspeaker Cable

### JIVE

**JIVE** is a high quality loudspeaker cable designed for hi-fi and music systems for which sound quality and value for money are important goals. **JIVE** is a very flexible and easy to use. Its white colour ensures that it is unobtrusive in domestic environments.

#### ***Silicone Rubber insulation for Sharper Leading Edges and Natural Decays***

Silicone rubber insulation is used because its low dielectric loss ensures extremely low distortion due to dielectric absorption effects in which sound energy is absorbed in the insulation and released at a later interval of time to create highly audible time-smearing distortion. By using silicone rubber insulation, **JIVE** guarantees you sharper leading edges to your music and lingering, more natural decays.

#### **Advanced Manufacturing Techniques to Reduce Noise and Distortion.**

**JIVE** uses two tin plated copper cores for positive and negative signal flows. These are connected in opposite directions. Listening tests have shown that this way the noise floor between the musical notes lowers. This gives 'blacker' silences in the interval between musical notes and enhances reproduction of the musical edges and natural decays in music.

#### **Specifications of JIVE**

- Conductors: 30 x 0.25mm diameter (15 gauge) tinned copper
- Insulation: Silicone rubber type GPC
- Outside diameter: 8mm
